ABSTRACT

A semantic typology of lexical flexibility

by

Daniel W. Hieber

The abstract should include 1) a brief statement of the problem; 2) a description of the methods and procedures used to gather data or study the problem; 3) a condensed summary of the findings. The abstract should be double-spaced. The recommended length is 1–2 pages.

Glossing Conventions

It is well known that the world's languages realize widely different sets of morphosyntactic categories (CITE: typological introductions, maybe Dixon's BLT) . Moreover, even when these categories bear the same name, they may differ drastically in their behavior (CITE: Haspelmath? Dixon? Others?) . It is the subject of much debate whether these language-specific categories can be mapped onto each other or compared in any useful way (CITE: Haspelmath 2010, other publications on this debate) . Recognizing these difficulties, I have made no attempt to standardize the linguistic terminology in the interlinear glossed examples throughout this thesis. I have, however, standardized the abbreviations used to refer to those terms. For example, even though one researcher may abbreviate Subject as SUBJ and another researcher abbreviate it as SUB, I nonetheless gloss all Subject morphemes in this thesis as SUBJ.

A.1 Glossing Abbreviations

The following table provides the meaning of each abbreviation used in interlinear glossed examples throughout this thesis.

SUBJ subject
