ABSTRACT

A semantic typology of lexical flexibility

by

Daniel W. Hieber

The abstract should include 1) a brief statement of the problem; 2) a description of the methods and procedures used to gather data or study the problem; 3) a condensed summary of the findings. The abstract should be double-spaced. The recommended length is 1–2 pages.

A Note on Linguistic Conventions

It is well known that the world's languages realize widely different sets of morphosyntactic categories (Whaley 1997: 58, Haspelmath 2007). Moreover, even when these categories bear the same name, they may differ drastically in their behavior (Dixon 2010: 9). It is the subject of much debate whether these language-specific categories can be mapped onto each other or compared in any useful way (Croft 2003: 13–19, Haspelmath 2010a,b, Newmeyer 2010, Hieber 2013: 308–310, Croft 2014, Plank 2016). Recognizing these difficulties, I have made no attempt to standardize the linguistic terminology in the interlinear glossed examples throughout this thesis. I have, however, standardized the abbreviations used to refer to those terms. For example, even though one researcher may abbreviate Subject as SUBJ and another researcher abbreviate it as SUB, I nonetheless gloss all Subject morphemes in this thesis as SUBJ.

It has become an increasingly common convention in typological studies to label language-specific constructions with initial capital letters (e.g. the English Subject construction), while terms that refer to language-general or semantic/functional concepts (e.g. the crosslinguistic notion of subject) are given in lowercase (Haspelmath 2010a: 674, Croft 2014: 535). I also follow this capitalization convention in this thesis.
